

Pontevedra

A city focused on pedestrians

Jesús Gómez Viñas
Municipal engineer

Munich, 2013

Walk21
MUNICH

CONCELLO DE
PONTEVEDRA

A blurred photograph of a person walking on a wooden floor. The person is wearing dark clothing and is captured in motion, with their legs and feet appearing as streaks. The floor is made of light-colored wooden planks. In the foreground, there is a dark, out-of-focus object, possibly a piece of furniture or a bag. The overall image has a sense of movement and is slightly out of focus.

**Pedestrian mobility
as a basis for a
high urban quality**

**14 years of
intense and
uninterrupted
drive**

**Sorry for the inconveniences...
We are playin' for u!**

1 The urban mobility

1 The urban mobility

Long distance mobility: safety and comfort of infrastructures and means of transport are higher and higher

1 The urban mobility

Urban areas: the outlook is not that optimistic

2. Is there a solution for urban mobility?

2. Is there a solution for urban mobility?

Are these the solutions?

2. Is there a solution for urban mobility?

Are we well focusing
the background problem?

2. Is there a solution for urban mobility?

We have to act in the cities we have inherited, giving solutions to our current way of life as well

3. The priorities of urban mobility modes are inverted

3. The priorities of urban mobility modes are inverted

1

2

3

4

What's the current mobility model?
How is it organized?

3. The priorities of urban mobility modes are inverted

Motorized mobility vs.
natural mobility

3. The priorities of urban mobility modes are inverted

The supposed rights acquired by cars:
the big unsolved background problem

3. The priorities of urban mobility modes are inverted

Individual vehicle crashes
other modes of urban mobility

3. The priorities of urban mobility modes are inverted

Natural mobility became almost marginal

4. Pedestrian mobility

4. Pedestrian mobility

Pedestrian mobility is the most basic and natural

4. Pedestrian mobility

Motorized mobility was a huge advance...

4. Pedestrian mobility

... but its functionality was absolutely invasive

4. Pedestrian mobility

Walking: the healthiest and most natural way to move in an urban environment

4. Pedestrian mobility

And it should play a most important role in intermodality

5. The urban road network

5. The urban road network

**PROHIBIDO
TRANSITO
PEATONES**

Pedestrians:
go home!

5. The urban road network

Urban roads became inhospitable and dysfunctional for pedestrians

5. The urban road network

All the priority is granted
to individual motorized mobility

5. The urban road network

Pavimento en mal estado y con baches en Los Dolores

26.08.10 - 00:53 - ★★★★★ 0 votos

0 Comentarios | 0 Compartir

Los vecinos de Los Dolores, especialmente los que residen en las viviendas de la calle Río Besós, se quejan desde hace meses de que los operarios del Ayuntamiento asfaltaron la Subida al Plan y las vías colindantes y se olvidaron de hacer lo propio en Río Besós. Además, aseguran que cuando llueve se inunda la zona por la falta de asfalto.

pavimento, estado, baches, dolores

A roadway in bad conditions is always an important public problem

6. Balance among the different mobilities

6. Balance among the different mobilities

It's time for
pedestrians

6. Balance among the different mobilities

Traffic and pedestrian mobility must receive an equitable treatment in urban roads

6. Balance among the different mobilities

There should be at least 2.5 m totally free for pedestrians

6. Balance among the different mobilities

Narrower cross-sections: single platform, calmed traffic and preference given to pedestrians

6. Balance among the different mobilities

Intermodal system
of pedestrian priority

1. Pedestrians
2. Bikes
3. Public transport
4. Private cars

7. The 'right' to park

7. The 'right' to park

Space is NEVER EVER enough

7. The 'right' to park

Parking in the streets or other more interesting uses for urban quality?

8. The concept of necessity

8. The concept of necessity

Establishing the concept of ‘necessity’
in an equitable and assumable way

8. The concept of necessity

Streets should not be parking lots

8. The concept of necessity

A more balanced
alternative

9. About speeds

9. About speeds

Permitting maximum speeds that may cause accidents: tragic consequences

9. About speeds

Top speed of
30 km/h
seems
appropriate

9. About speeds

2010: a local law establishing a maximum speed limit of 30 Km/h citywide

9. About speeds

Laws and ordinances are important...

9. About speeds

...but effective compliance is even more important

10. Social dynamics

10. Social dynamics

We walk, but...

10. Social dynamics

... the motorized individual mode resists losing its prebends in cities

11. Fourteen years of experience

11. Fourteen years of experience

The implementation process has advanced considerably

11. Fourteen years of experience

Urban quality and the quality of pedestrian mobility are high

11. Fourteen years of experience

Everyone who 'needs' to move around can do it much more easily

11. Fourteen years of experience

Accident rates are very low: no deaths or serious injuries in transformed areas

12. A total inversion of priorities

12. A total inversion of priorities

Prioritizing pedestrian mobility motor traffic intensities become manageable

12. A total inversion of priorities

Every city has a different size and characteristics but these principles of action can be valid for everyone

What Pontevedra sounds like?

What Pontevedra sounds like?

Urban quality and safety

A really low ambient noise

Thank you!
